Overview

THEMIS IA turns the complex, time-intensive task of building and maintaining a robust information architecture into an automated, intelligent process.

THEMIS IA's step by step workflow makes it easy to build, collect team feedback, test, and provision your critical assets:

Site structure

Navigation

Security

Content Types & Fields

Naomi Money Penny, Microsoft

Any investment that you make in information architecture will pay dividends in AI, helping to give it structure, helping to give it seeding, and actually promoting a much better experience.

Benefits of THEMIS IA

- Cut your deployment times up to 50%
- Error-free deployments
- Effective Team Collaboration
- Centralized app as a no-code solution
- Visual reporting and reusable components

Your information architecture is mission critical

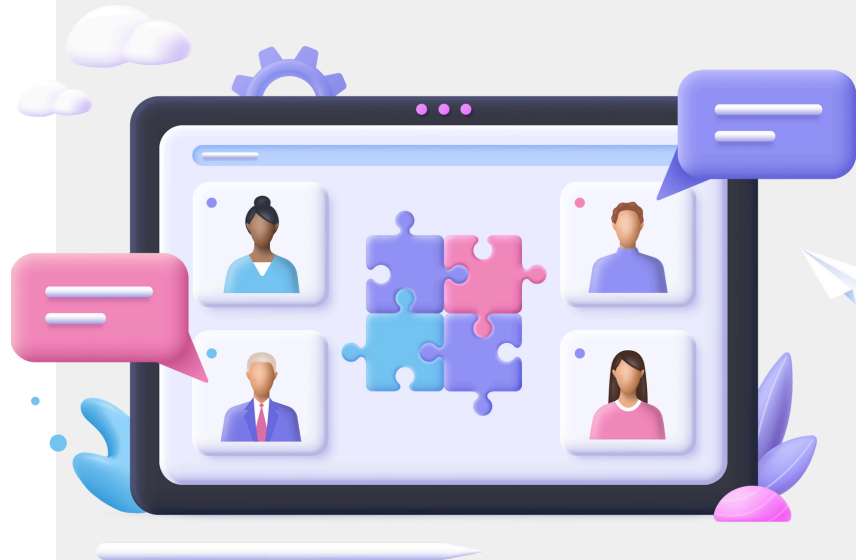

With THEMIS IA your team can unlock an information architecture that can be broadly accepted by users, enhance content findability, provide content lifecycle management, and be a gateway to a great corporate governance program.

Sun Dai, Director of Records Management at the City of Ottawa

"THEMIS IA helped our Information Managers and Business Owners eliminate the laborious processes, errors, and guesswork of manually setting up and managing an information architecture."

The THEMIS IA Process

IA Analysis

Diagnose your current Information Architecture

1

THEMIS IA Designer

Personalize your fields and IA structure with our interactive modelling process

2

IA Visualization

Review and adjust the hierarchical flow of your site structure

3

Deploy to Sandbox

Publish to your SharePoint sandbox so users can interact and provide feedback

4

Iteration and Acceptance

Comment, review, and tweak design based on user feedback

5

Publish and GO LIVE

QA or UAT

6

The Foundations of Information Architecture

Productivity & User Adoption

Intuitive Search

A solid information architecture improves search speed and accuracy

Site Navigation

Ease of navigation between sites

Enterprise Content Management

Effective Electronic Content Management (ECM)

Standardization of enterprise content and classification is essential to effective content management

Compliance and Governance

Corporate Governance & Compliance

Content classification standardization is key to compliance and corporate governance

Records Management

A solid information architecture reduces misclassification of records
